

Fact sheet

MAINTENANCE

The long-term performance of your sorting facility depends largely on consistent maintenance and regular inspections. The slightest deviations or unnoticed wear can impair the sorting results during ongoing operation or cause unplanned downtimes. With our maintenance service (including inspection), you keep your system's availability extremely high, extend its service life and ensure consistently stable sorting results.

Our specialists check all relevant components, carry out maintenance work precisely according to the manual and optimise the mechatronic systems by means of function tests and adjustments. Minor repairs, safety checks and troubleshooting are, of course, also included.

We also give you specific recommendations for repairs, optimisations, modernisations and/or process improvements – individually tailored to your system configuration.

THE RESOURCE
SEARCH ENGINE
