

# Fact sheet **REPAIRS**

Component failures or wear are part of the everyday life of every machine. The key factor is how quickly and professionally the replacement is carried out in order to ensure system availability and minimise downtimes. With our repair service, we replace defective or worn components, recommission affected systems and ensure sorting performance through function tests and safety checks. Minor repairs as part of the replacement are, of course, included.

On request, we can combine our repair service with preventive maintenance to avoid unplanned downtimes of your sorting facility in the long term.

THE RESOURCE  
SEARCH ENGINE
