

Fact sheet

MAINTENANCE TRAINING

Well-trained maintenance personnel are the key to stable and trouble-free system operation – especially with complex sorting systems. With our maintenance training, we train your technicians specifically to maintain and service your STEINERT system. Our specialists use the machine to convey practical expertise on how it works, setting options, special technical features and how to identify and rectify typical faults – based on the STEINERT operating manual. This ensures the long-term availability of your system and reduces unplanned downtimes.

THE RESOURCE
SEARCH ENGINE

+ THE BENEFITS TO YOU

- + Improved sorting results
- + Assurance of a higher level of system availability
- + Optimisation of service life
- + More efficient start up
