

Fact sheet

OPERATOR TRAINING

Operator errors are one of the most common causes of instability in the sorting process – especially in the early operating phase or if there are changes of personnel. With our operator training, we train your machine operators directly on the system and enable them to control the sorting system safely and efficiently. Our specialists convey practical knowledge about how it works, setting options and how to quickly rectify typical faults – based on the STEINERT operating manual. The training ensures greater operational reliability, stable sorting results and reduces the need for additional on-site deployments.

THE RESOURCE
 SEARCH ENGINE

+ THE BENEFITS TO YOU

- + Improved sorting results
- + Assurance of a higher level of system availability
- + Optimisation of service life
- + More efficient start up
- + Cost savings by avoiding additional on-site deployments

+ SERVICE DESCRIPTION

STEINERT's operator training includes the following services:

- + Operator training directly on the machine
- + Conveyance of the contents of the operating manual
- + Explanation of how the machine works and setting options
- + Fault identification and initial troubleshooting measures

OPERATOR TRAINING

Costs

According to offer

Place of fulfilment

On-site, optionally in-house

Prerequisite

Appropriate professional qualification required

Performance period

24/7/365 (upon prior appointment coordination)
