

Fact sheet

REFURBISHMENT

Refurbishing individual components can be an economically viable alternative to buying new ones – especially if the function and performance of the original parts can be restored. With our refurbishment service, we analyse the condition and wear of individual components, check if they are in working order and draw up a repair proposal. Repairs are carried out exclusively with original parts directly from the manufacturer – if required, we can provide a loan device during this time. In the case of our pole drums, you also have the option of simply purchasing a replacement device for the price of refurbishing your device. The result is a longer service life, reduced downtimes and a sorting performance like on the very first day.

THE RESOURCE
SEARCH ENGINE

+ THE BENEFITS TO YOU

- + Warranty of 1 year on the refurbished components or the replacement device
- + Higher system availability
- + Reduced downtimes
- + Improved sorting results
- + Extended machine service life
- + In combination with repair and maintenance, reduced unplanned downtimes

+ SERVICE DESCRIPTION

STEINERT's refurbishment service includes the following services:
